Notes:

- The power supply of this DVR is provided through DC12V adapter, please check the power output before installation and ensure it can meet the requirements;
- Do not place the DVR at a place subject to rain and moisture;
- Do not install the DVR at a place subject to violent vibration;
- Do not install the DVR at a place subject to direct sunlight, and be far away from high temperature environment;
- The DVR should be installed in a space without much dust, and the environment should be kept clean and tidy;
- The DVR's back panel should be placed 15cm or more away from other objects or wall for cooling;
- The DVR should work under temperature, humidity and voltage according to its technical specifications;
- The space where DVR is installed should not be stored with corrosive chemicals that may produce volatile gases to avoid affecting the DVR's life;
- Proper grounding should be guaranteed during operation;
- The DVR shall be installed to ensure proper connection with other devices.
- Please buy HDD from official channel to meet DVR's long time and large data reading and writing requirements.

Statement:

- This manual only introduces basic operation.
- Products are subject to the real products and this manual is just for reference.
- Products update without further notice. Nuances of partial functions are permitted before and after updating.
- Please contact the Customer Service Department for the latest program and supplementary instruction files.
- This manual is applicable to various models, and the specific operation of each product is not listed here. Users can operate the DVR based on this manual for the actual products.
- We have tried our best to ensure the completeness and accuracy of this manual. However, due to the unstable environment and other reasons, the real value of some data may differ. If any problem or dispute arises, the company's final explanation will prevail.
- If carrying out operation not according to the instruction of this manual, the user shall bear the losses sustained.

Chapter 1 Overview

1.1 Introduction

This product is a consumer-oriented 4/8/16-channels CIF/Half-D1/D1 real-time network DVR and adopt the industry's most advanced SOC technology and standard H.264 encoding method, so that the image quality is higher, network transmission effect is better and system is more stable; the body is made under stylish appearance design and sophisticated manufacturing process, the 1U standard chassis is suitable for small-scale monitoring places such as shop, supermarket, residential, school, hotel, Internet cafe, family and other civilian sites where require more on video quality, network transmission and real-time playback.

1.2 Packaging and accessories

Following parts are included in the package:

◎ One IR remote controller
◎ A pair of remote controller batteries
◎ One piece of product certificate
◎ One piece of product instruction
◎ One piece of SATA hard disk data cable(installed in the host)
◎ One DC12V3A power adapter
◎ Support HDD(already installed) and a set of mounting screws.
◎ One piece of HDD power cable (already installed in the host)
◎ One piece of CD.

1.3 Main features

◎ Standard H.264 video compression format
◎ 16-bit true-color semi-transparent graphical menu interface, menu options tip
◎ A variety of recording modes: manual, timing, movement and alarm recording
◎ Optimized four-channel simultaneous playback (single playback for eight-channel ones)
◎ A variety of backup (USB flash drives, mobile hard disk, network)
◎ One USB2.0 for data backup, one USB2.0 for the mouse operation
◎ Multi-functional operation, recording, playback, monitor, backup and network transmission can be realized at the same time
◎ Dual stream technology
◎ Support network to implement multi-screen real-time browsing, parameter setting, copy or playback
◎ Support mobile phone monitoring
◎ Support event classification and precise time search and playback
◎ Defaulted parameter value fast recovery
◎ Flexible USB interface for mouse

1.4 Technical parameters

Features	Description
Operating system	Embedded LINUX OS
Video compression	H.264
Video input	4/8/16 channels BNC
Video output	Support BNC, VGA and HDMI
Audio input/output	Without/1/2/4/8-ch input RCA ;without/1-ch output RCA (optional)
Alarm input/output	Without/4/8-ch input (optional);without/1-ch output(optional)
Display	1/4/9/16-channels

BUY ON www.cablematic.com

Multiplex operation	Live, recording, network, ,mobile phone surveillance simultaneously
Recording mode	Timer/manual/motion detection/alarm
Recording frame rate	PAL：25fps NTSC：30fps
Recording quality	Highest, higher,medium,low,lower,lowest
Recording resolution	CIF/Half-D1/D1/960H frame rate adjustable
Recording playback	1/4/8 /16 channels playback simultaneously(optional)
Recording backup	Support USB flash drives backup, moved hard disk backup, network backup, backup by files, backup by time
Action with Alarm	Support
Email alarm	Send pictures to the designated Email
FTP transmission	Support
PTZ control	Support
PTZ protocol	PELCO-D,PELCO-P etc
PIP	Support
Zoom	Support
HDD	Support 1 SATA HDD，capacity to 4T
Network and protocol	1 RJ-45 10/100M via Ethernet，support TCP/IP、DHCP、DNS、DDNS、UPNP 、NTP etc
IE browser	Support
Client software	Support
CMS	Support
Dual stream	Support（main and secondary interchange）
Group play	Support five users online access
Multi-language	Support
Mobile phone surveillance	Support windows/symbian/iPhone/blackberry/android operation system
QR code	Support
P2P cloud	Support
DDNS	Support domain name
Mouse interface	USB2.0
Backup interface	USB2.0
Remote controller	Support（Support controller ID matching）
User authority	Support multi-level user authority distribution
Power	DC12V 3A/5A
Working temperature	0℃-50℃
Working humidity	10%－90%

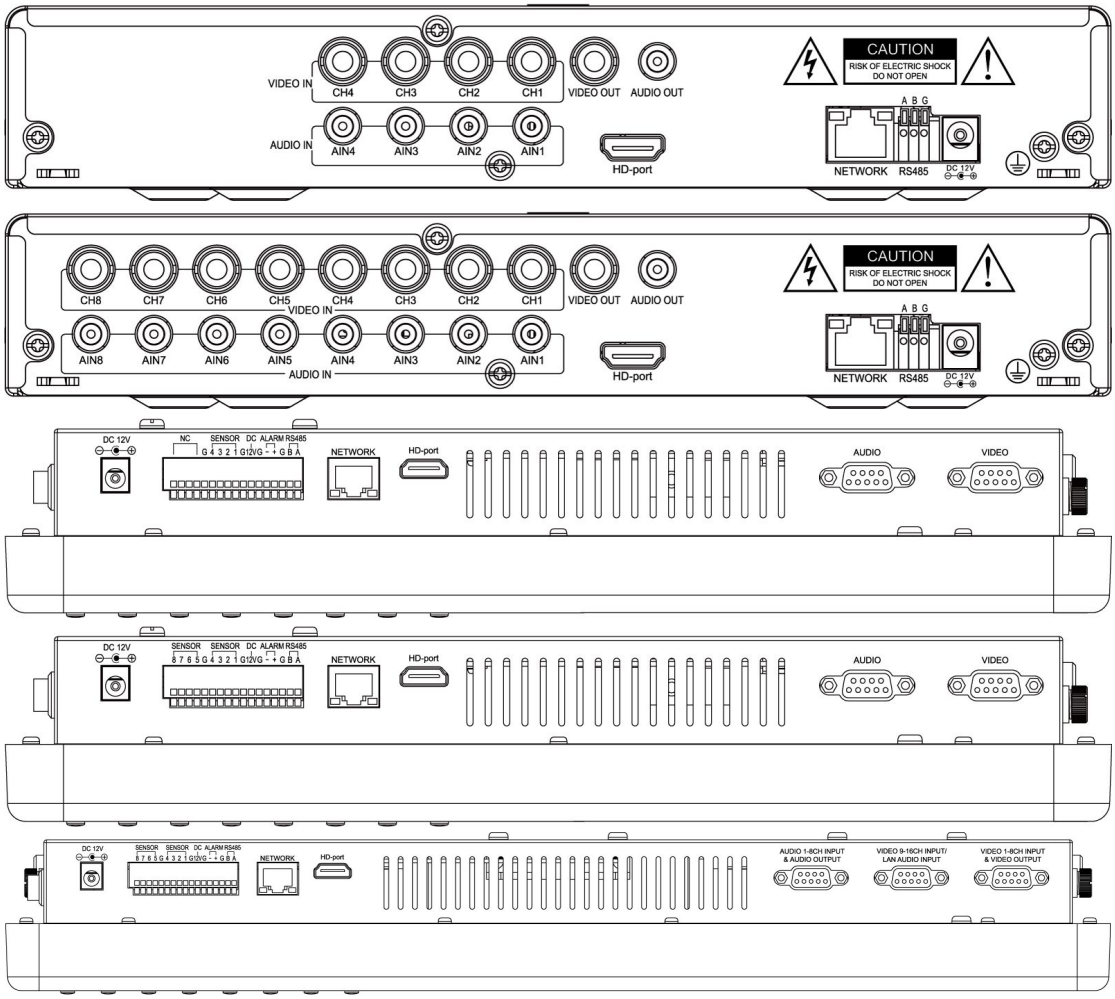
Physical interface	Interface description
AUDIO	Audio input and output interfaces, please connect according to the digital ID of extension cable
VIDEO	Video input and output interface
NETWORK	RJ-45 network interface, connect the Ethernet
RS485+/-	Connect the RS485 interfaces in equipments like PTZ

BUY ON www.cablematic.com

ALARM+/-	Connect alarm switch output
DC12V	Connect DC12/5A power adapter
SENSOR	Connect alarm switch input
G	Alarm input common interface

2.2 Rear panel and ports

Note: the real production maybe have some difference with this panels below.



Note:

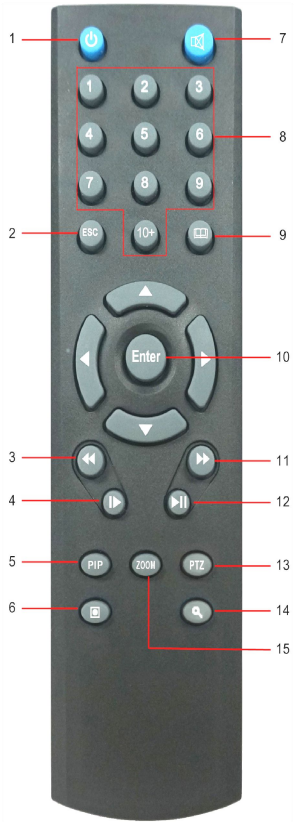
1, RS485 A should connect to PTZ data+, B to data-;

2, Recommend connecting the DVR housing to ground (PE cable).

2.3 IR remote control

The DVR can be controlled with the IR remote control. Ensure the batteries are installed before using.

BUY ON www.cablematic.com



NO.	Name	Description
1	POWER OFF	Shutdown the DVR
2	ESC	Quit the menu
3	FAST REWIND	Change the rewind speed
4	SETP	Playback frame by frame
5	PIP	Show video picture in picture
6	RECORD	Start/stop manual record
7	MUTE	Disable the sound
8	NUMBER	Switch the channel
9	MENU	Enter to the menu(**press it 15sec to switch VGA and CVBS operation menu**)
10	ENTER	Confirm an item (**press it 15sec to restore factory default**)
11	FAST FORWARD	Change the forward speed
12	PLAY / PAUSE	Play and pause when playback
13	PTZ	Move the PTZ camera
14	SEARCH	Playback the video
15	ZOOM	Enlarge the channel image

2.4 Hardware installation

2.4.1 HDD installation

(1)Open the cover of the DVR, fix the HDD into the bracket;.

(2)Connect the HDD data and power cables to the HDD;

(3)Tighten the screws to fix the HDD in the case;

(4)Lock the cover with crews.

Note: Do not plug in or out the HDD when the DVR powered on.

2.4.2 Connection to the camera and monitor

Connecting the signal of camera with a BNC cable to the DVR video input, connect the signal of DVR video output with a BNC cable to the monitor (Please refer to the back panel figure). Connect the RS485A (+) and the B (-) respectively to corresponding DVR interface with wires, if camera is the PTZ which can be controlled.

Note: Please refer to the electric topology in the last page to connect the devices.

BUY ON www.cablematic.com

Chapter 3 Basic Operation

Tips:The DVR defaulted display mode is VGA, if user use DVR BNC(CVBS) port for output, please press the front panel "menu" button for about 15s till system switching to BNC display mode automatically, or use VGA output, to access into the DVR system and adjust the screen display resolution too CVBS, then user can operate and control the DVR.

3.1 the Setup Wizard

1. Connect the DC 12V output plug to power port on the back panel of the DVR;
2. Connect the power supply plug to the outlet;
3. Switch on the Power button, (the "Power" light is on);
4. After system start up, start the setup Wizard;
5. This step you can configure the basic parameters, such as, device name, language, date time ,etc.

BUY ON www.cablematic.com

Note: The Sensor record schedule default setting is all selected ,and it shows in blue.

3.6.5.4 Other

The “Disk Full” in Alarm type means if the disk capacity is less than the set of Disk Shortage Alarm, relevant prompt will be shown at the bottom right of screen; IP confliction means when 2 or more than 2 PC share the same IP address in the same network segment, alarm will work after setting up the buzzer alarm and trigger alarm; Select “Disconnect”---Click “Buzzer” or “Trigger” , The system will buzzer or send the relevant alarm tips while the internet disconnect.

Select “Connection Problem” , user can do Buzzer, E-mail and Alarm Trigger setting. When the HDD is disconnected, the alarm will be triggered. Click “Default”, the system will restore the factory setting,;click “Apply” it will save the setting above.

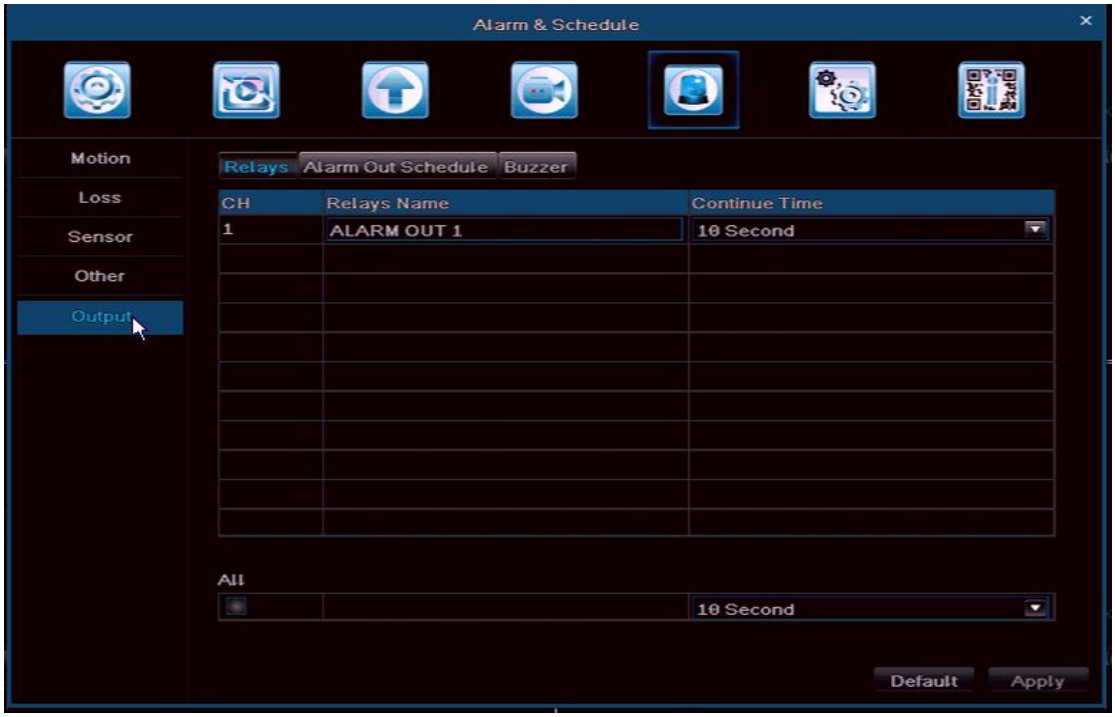
3.6.5.5 Output

Sensor alarm includes 3 sub-menu : Relays, Alarm out Schedule, Buzzer.

Relays: In this column, set the “Alarm out name”,and select the Alarm Continue Time (means the time intervals between two alarm action), user can apply the same alarm setting to all the channel by clicking “All”.

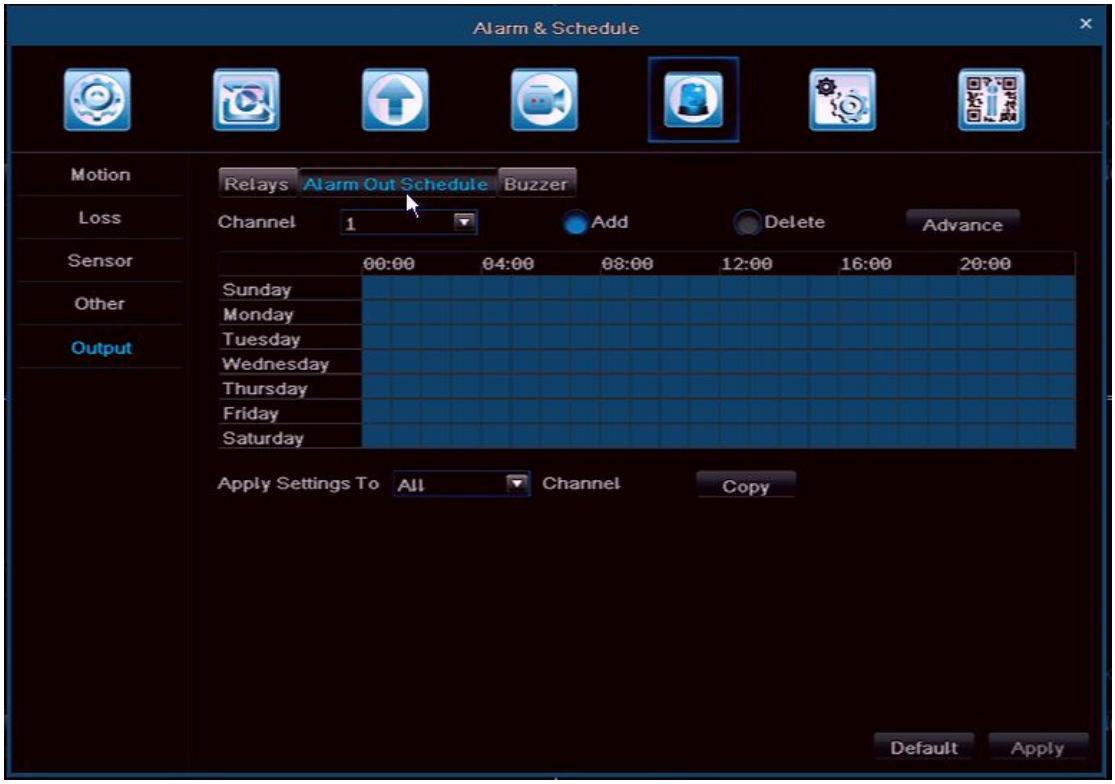
Click “Default”, the system will restore the factory setting,;click “Apply” it will save the setting above.

BUY ON www.cablematic.com



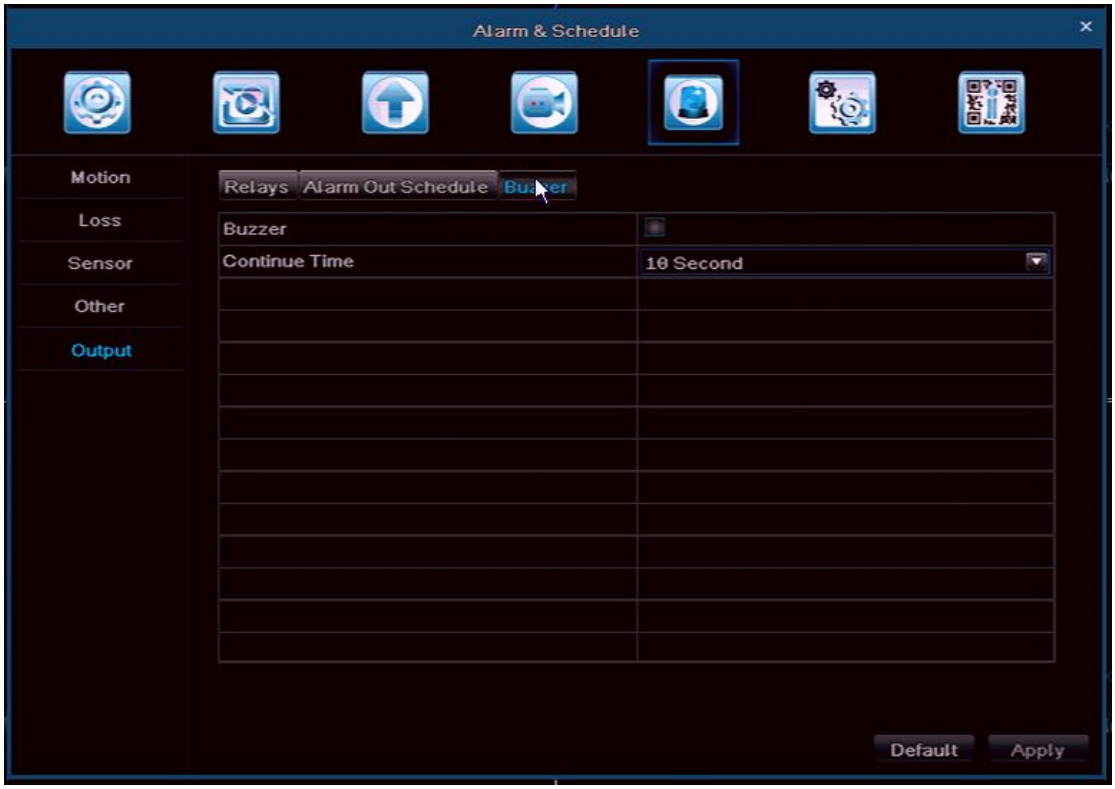
Alarm out Schedule: Alarm out Schedule Setting way is most the same as Time Record, please refer to the Record Schedule

Note: The Alarm Out Schedule default setting is all selected ,and it shows in blue.



Buzzer: In this interface, click :"Buzzer", and select the "Continue Time"

BUY ON www.cablematic.com



Note: The "Buzzer" must be clicked, or otherwise it won't buzzer.

3.6.6 Advanced Setting

It includes 7 sub-manus: Network, E-mail, DDNS, FTP, PTZ, User Admin, and Block / Allow List.

Network

HTTP Port: Default port: 80, if it is changed, when using IE browser to do remote surveillance, need to add new port after the IP address. For example: if you reset as 7840, you need to type http://192.168.2.133:7804 instead of http://192.168.2.133.

Media Port: for CMS,, Mobile App, default setting : 9000

UPNP: Click "UPNP"and enable the function, user can visit the DVR through WAN (Manual port forwarding is suggested.)

Network Type: Including :STATIC, DHCP, PPPOE, and 3G.

If select STATIC, it need to set IP address, Subnet Mask, Gateway, preferred DNS Server and Alternate DNS Server.

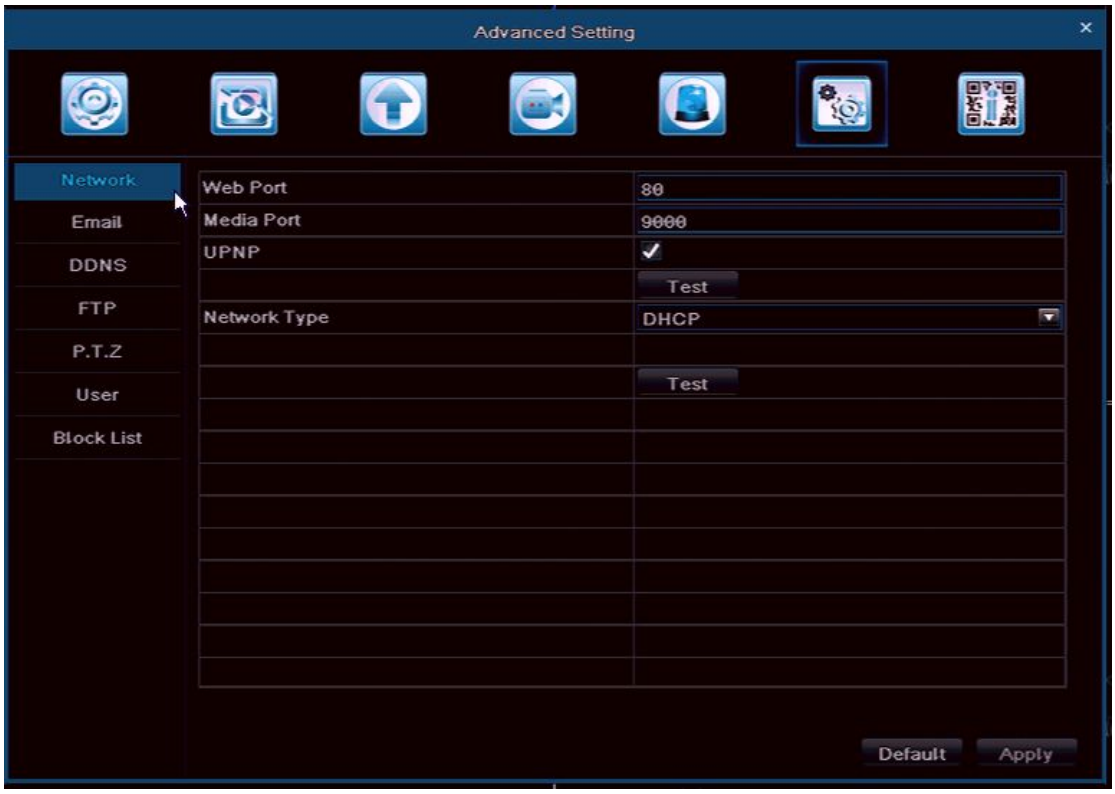
Note: The DVR and the router must in the same network. For example: The Router IP is 192.168.1.1, then the DVR IP must be 192.168.1.xxx, the Gateway is 192.168.1.1.

If select DHCP, The device will automatic dispose and set the IP address, Subnet Mask, Gateway, preferred DNS Server and Alternate DNS Server etc.

If select PPPoE, user need to enter Broadband or dial-up user name and password, save and restart the system, DVR will will auto obtain an IP address.

If select 3G, user need to enter the 3G type （CDMA2000 or WCDMA）,save and restart the system, DVR will will auto obtain an IP address.

BUY ON www.cablematic.com



E-mail

SMTP Server/ Port: you can find out E-mail SMTP port in the internet

Click “SSL Check”, enable to set the E-mail SMTP server (Like Gmail).

Send Address/ Password: Sender’s E-mail ID and password.

Receive Address: user can enter three different E-mail Address.

Click “Test”to verify E-mail.

Number of snapshot: Click and enable to send the the snapshot as attached file by E-mail.

Snap Time interval: Set the Time Interval between two snapshot.

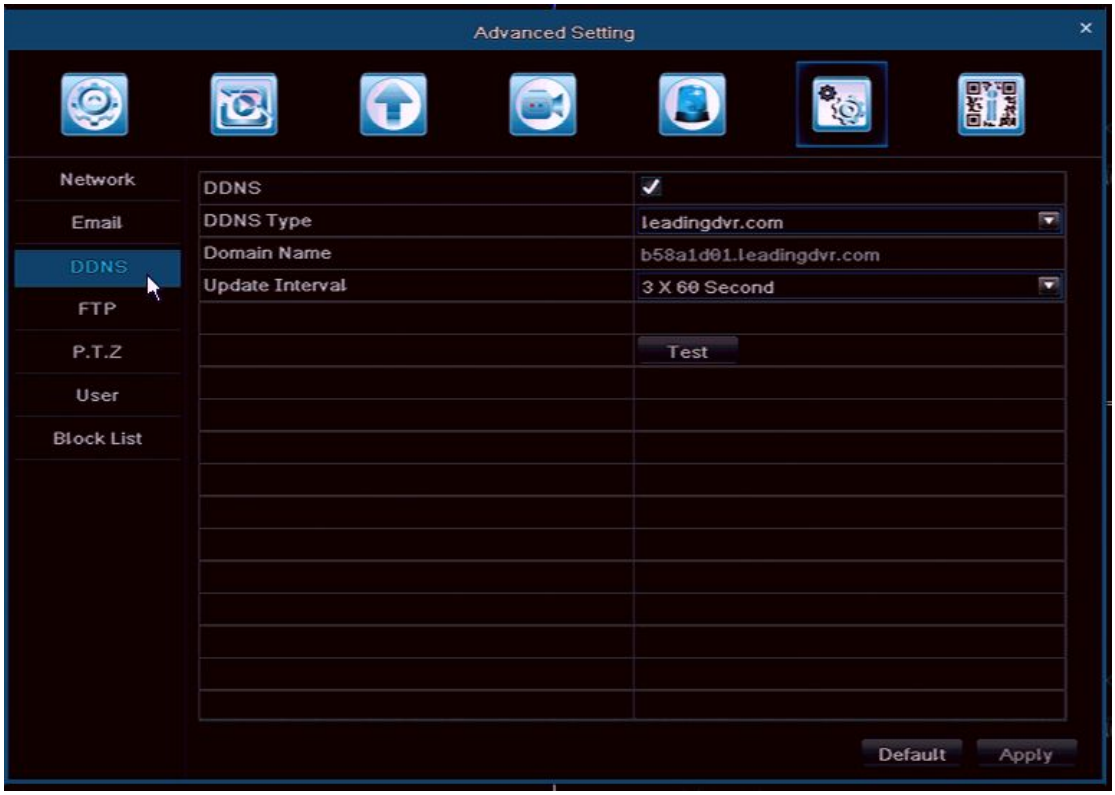
BUY ON www.cablematic.com

DDNS: User can set the WANIP address , ORAY , 3322 IP and Domain Name etc.

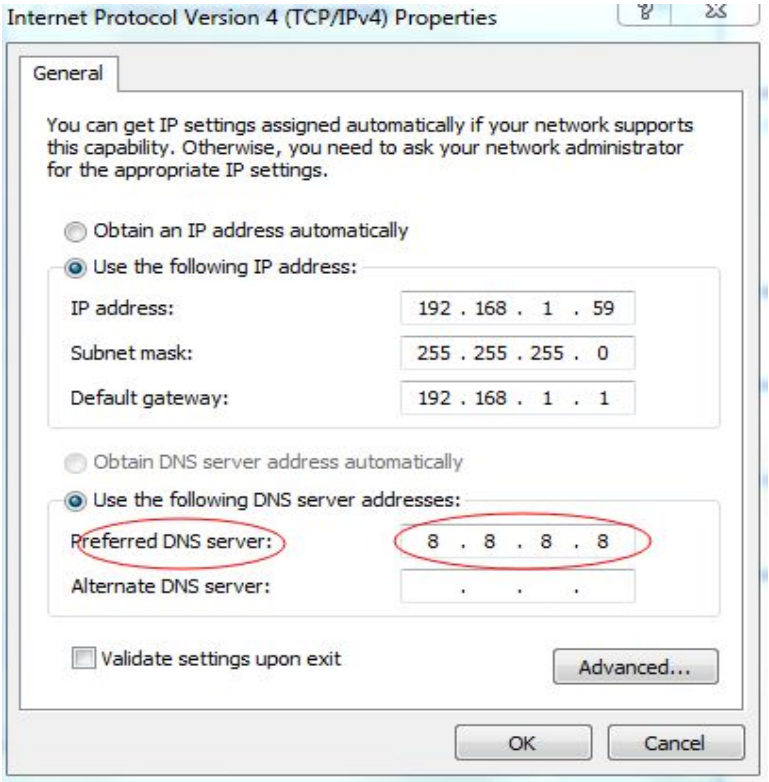
Click “DDNS”, and select the recommended DDNS Type: leadingdvr.com, the device will auto obtain an Domain Name, User also can use the other Domain Name, but it need to register on the website .

Note: When visiting by Domain Name, User need to do port forwarding setting in router, and do HTTP and server port mapping., or enable the DMZ host in the router, and the IP as the DVR IP address.

BUY ON www.cablematic.com



Note:when you use the DDNS:leadingdvr.com,pls change your PC DNS like this:



Internet Protocol Version 4 (TCP/IPv4) Properties
General
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.
Obtain an IP address automatically
Use the following IP address:
IP address: 192 . 168 . 1 . 59
Subnet mask: 255 . 255 . 255 . 0
Default gateway: 192 . 168 . 1 . 1
Obtain DNS server address automatically
Use the following DNS server addresses:
Preferred DNS server: 8 . 8 . 8 . 8
Alternate DNS server:
Validate settings upon exit
Advanced...
OK
Cancel

FTP: this function is similar to the SMTP Server, build a FTP server by LAN computer, set user name and password. Add computer LAN IP address, Port in the DVR, and set the Remote Directory, after setting, then the snapshot can be sent to specify Catalog in computer

BUY ON www.cablematic.com

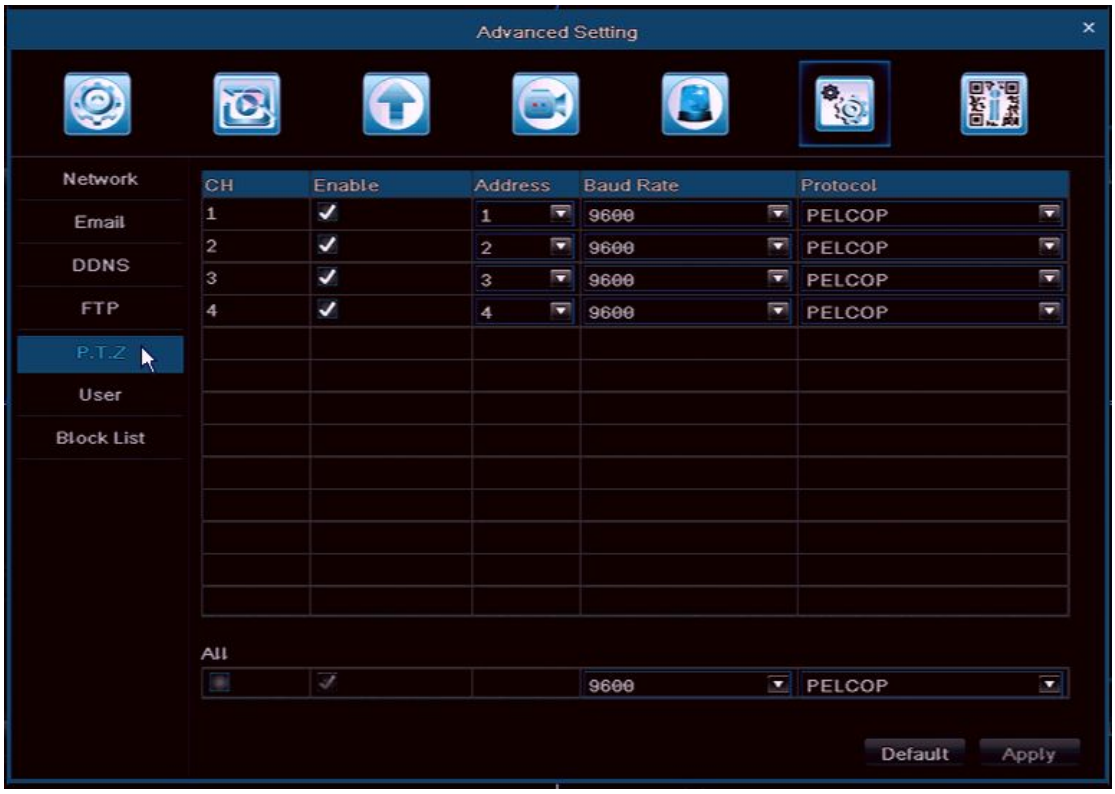
PTZ: After connect the PTZ to DVR and enable, user can set the Address, Baud Rate and Protocol, only they match the PTZ, then can connect the PTZ Camera to DVR successfully.

Address: The supported address range is 1~255, the PTZ address can be set manually on Dome Camera.

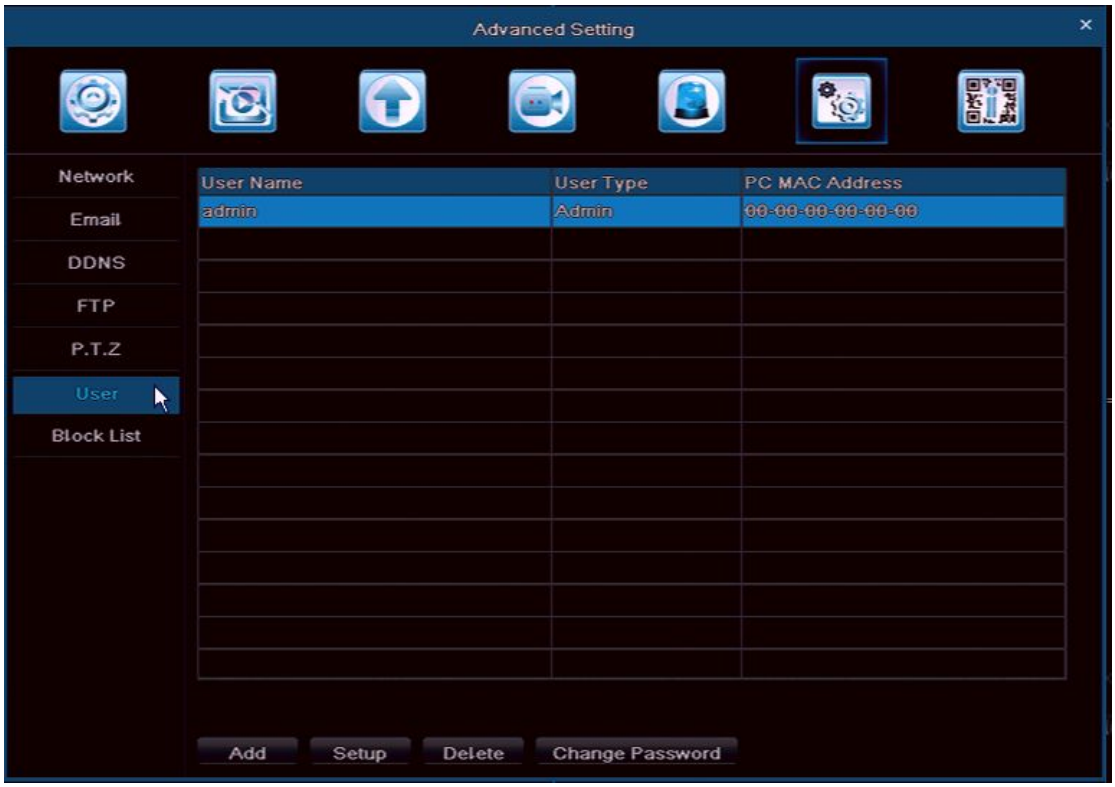
Baud Rate: Each PTZ has a fixed factory Baud rate, while it connect to the DVR, the two Baud Rate must be consistent.

Protocol: Each PTZ has a protocol, while it connect to the DVR, the two protocol must be consistent.

BUY ON www.cablematic.com

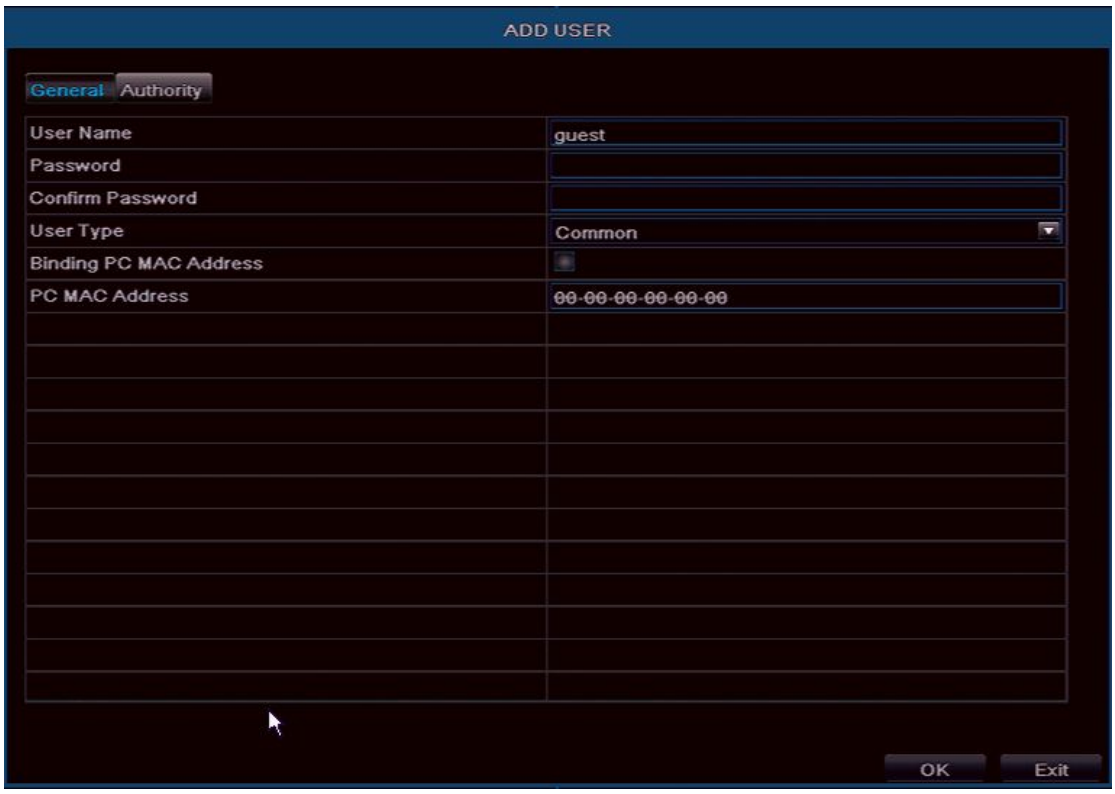


User Admin: Use the user name to login the system and has all the operating right, Administrator can add and delete Non-admin account, change all the account passwords,including administrator's ,and set the Permissions right to non-admin account

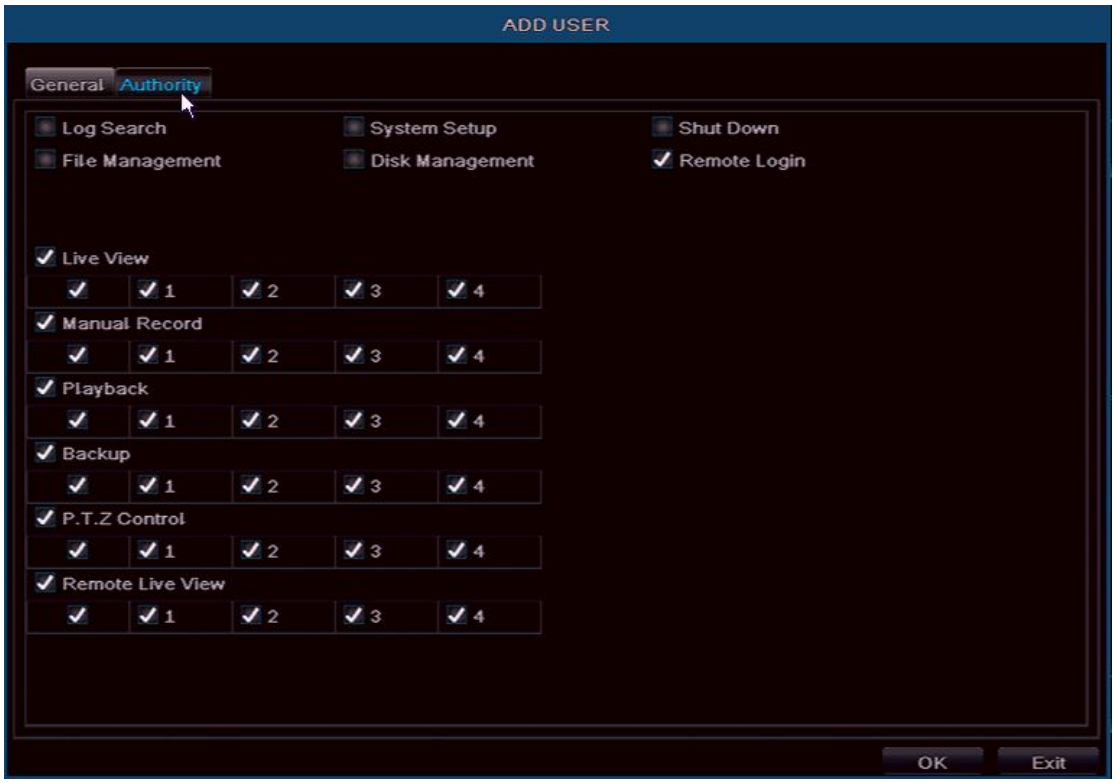


Add User

BUY ON www.cablematic.com



Permission setting: set the Permissions right to non-admin account according to needs.



Block/ Allow List: to block or allow the computer user in a segments to visite the DVR. Click “Block list”,and set the initial IP address and end IP address, the computer users in this segments can not visit the DVR; if click “Allow List”,set the segments, the only allow these users to visit the DVR.

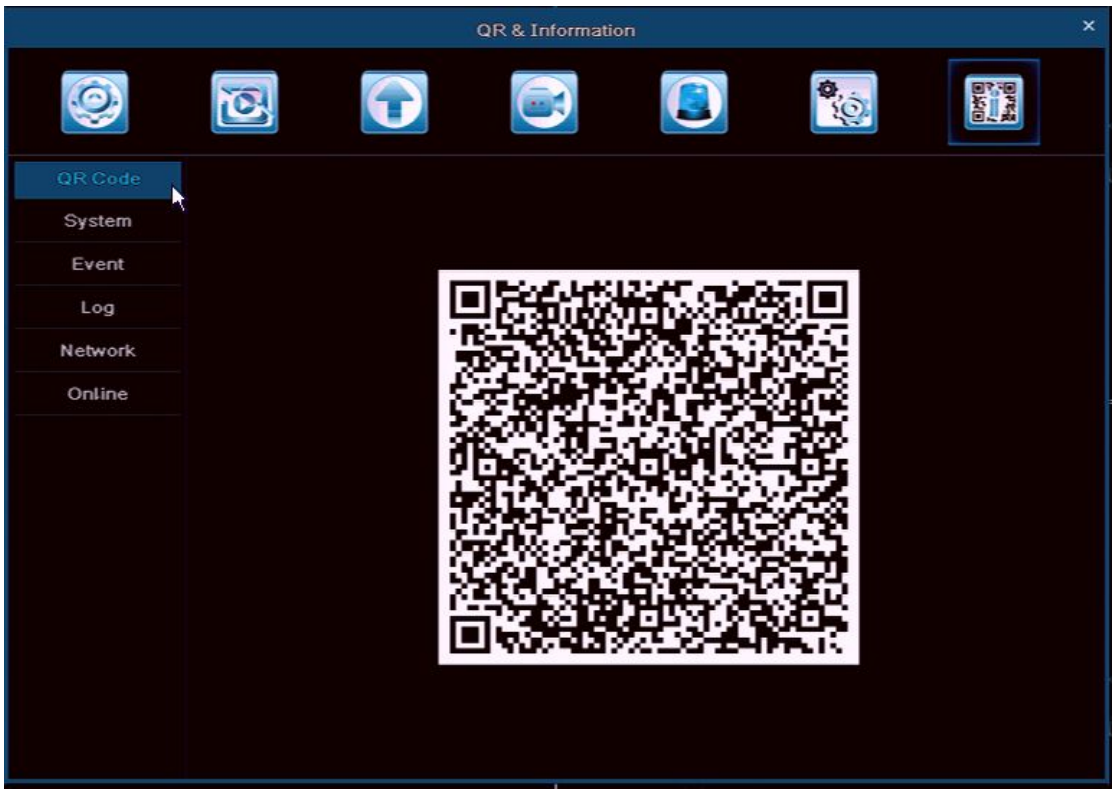
BUY ON www.cablematic.com

3.6.7 QR & Information

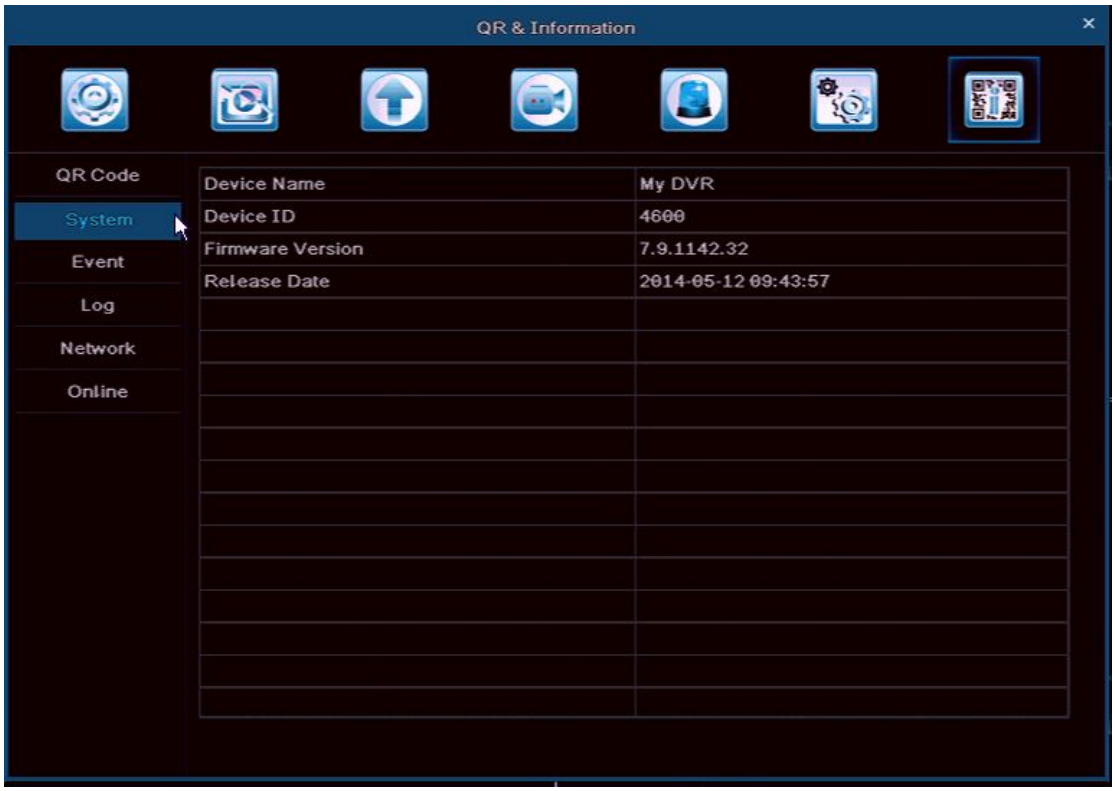
3.6.7.1 QR Code

The QR code Image can be scaned by Mobile phone. If the mobile phone didn't install a surveillance APP, can use other mobile scanning software to scan the QR Code to connect to the download address (Android & Apple), and download a free Mobile App. If it already install surveillance software (Mobile App), can scan the UID (P2P) to realize mobile live view.

BUY ON www.cablematic.com

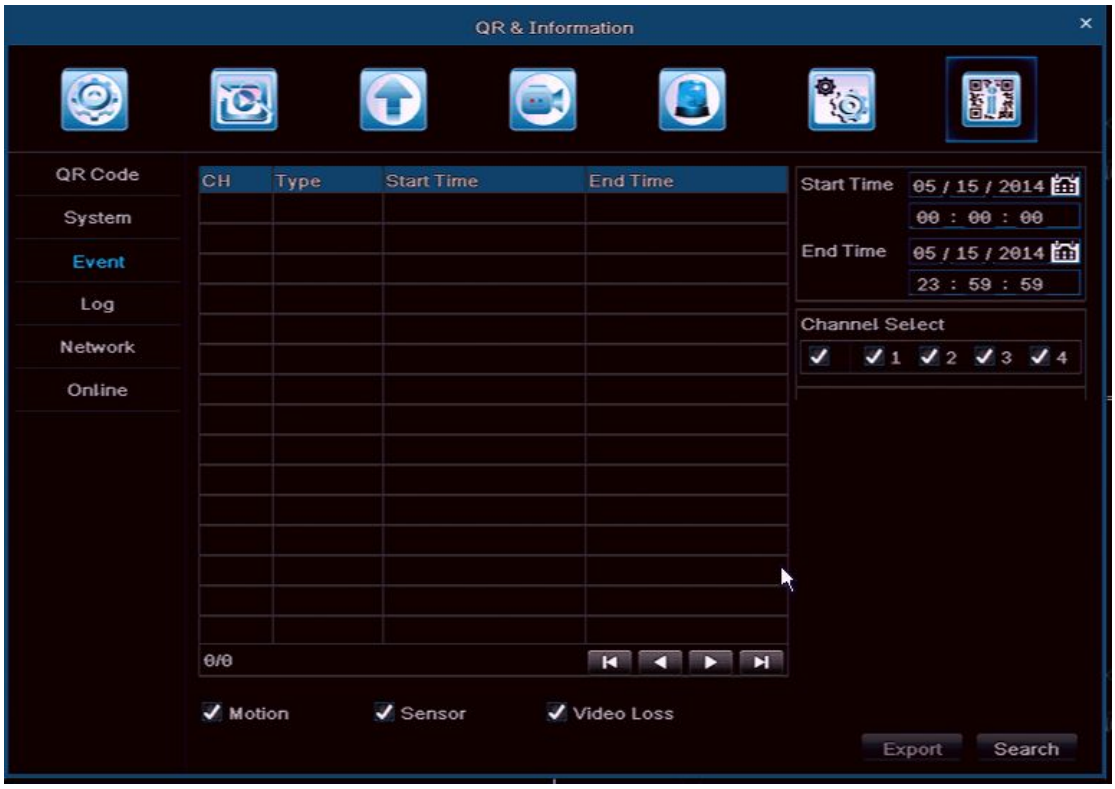


System: user can find the Device Name, Device ID, Firmware Version and Release Date.

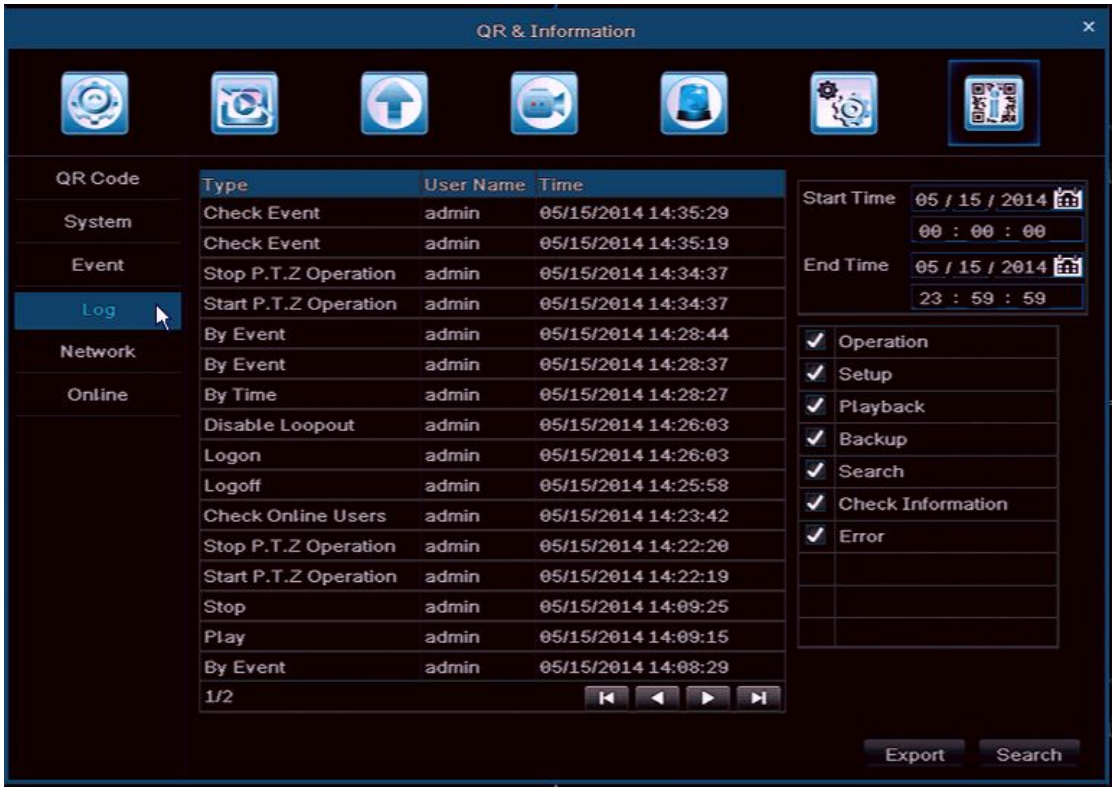


Event: user can search all the events here like: Motion detection, Sensor Alarm,Video loss

BUY ON www.cablematic.com



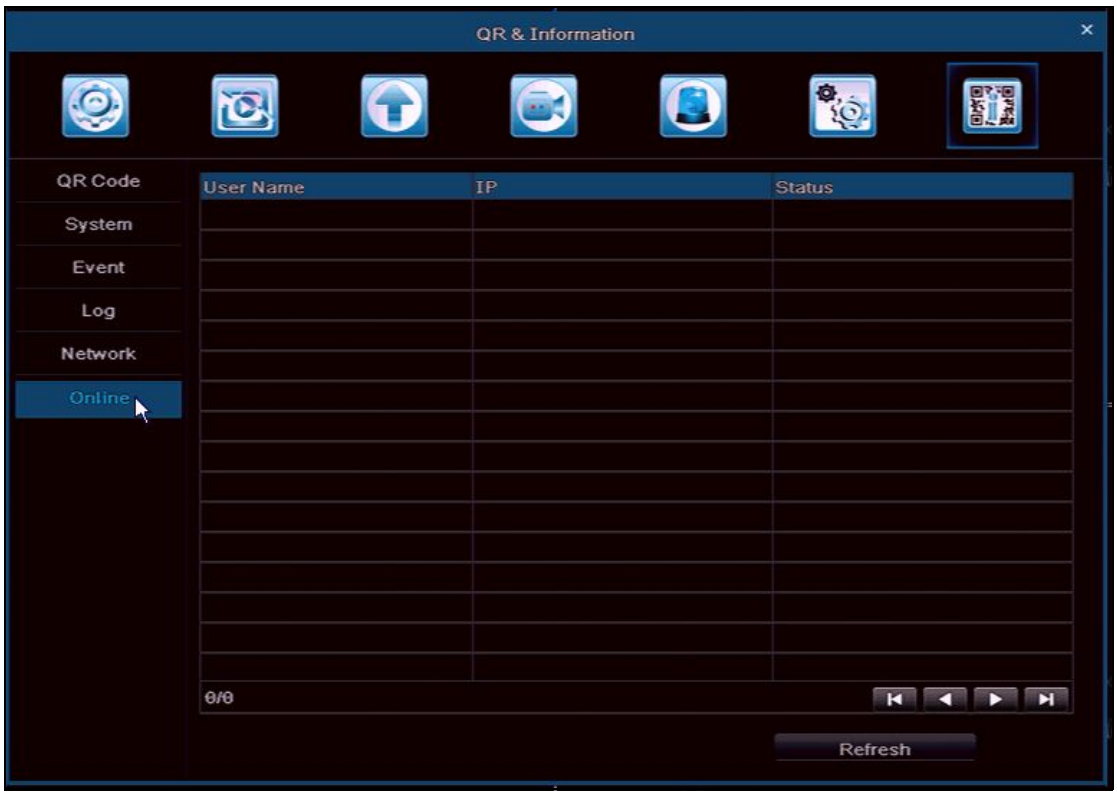
Log: User can check all users' device operation (including administrator)



Network: user can check the device port, IP Address and P2P (UID) information etc, also can check the Cloud status in this column.

BUY ON www.cablematic.com

Online User: User can check the PC port and APP visitors list in this column.



BUY ON www.cablematic.com

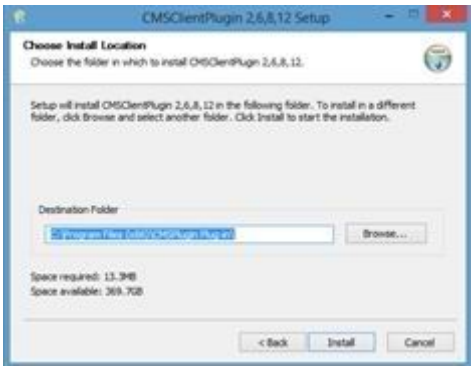
Chapter 4 Remote View

4.1 Remote view via IE browser

4.1.1 LAN

When DVR connect to the Router, firstly, check the router IP address，generally, the IP is 192.168.1.1（192.168.1.254）, then enter the network control setting of the DVR, and enter the IP Address and Gateway (Router IP), the IP address must in the same segments with the router. For example: Router IP is 192.168.1.1, the DVR IP set as 192.168.1.X。After finishing the setting, open the IE Browser, and enter the cloud web site:**http://www.easyconfigure.com**,or you can enter DVR IP address: http://192. 168. 1. X:Web port, then click “Enter”, and it will download the IE Active-X control (IE Browser must allow to download the Active-X control, for more detailed operation, please refer to appendix 1)

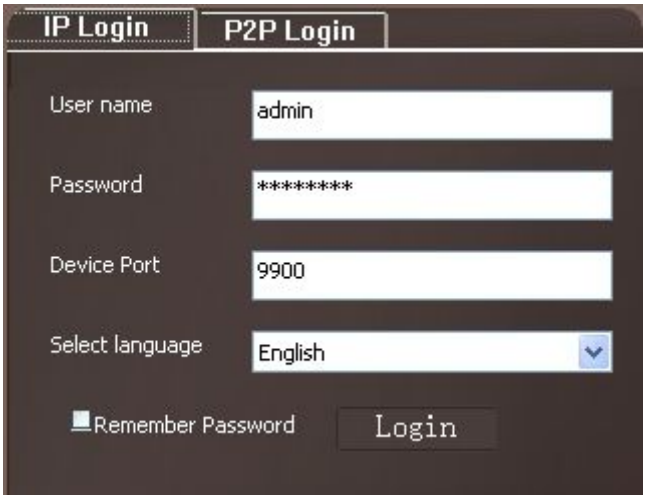
after complete download, a dialogue window will pop up, as the Picture:



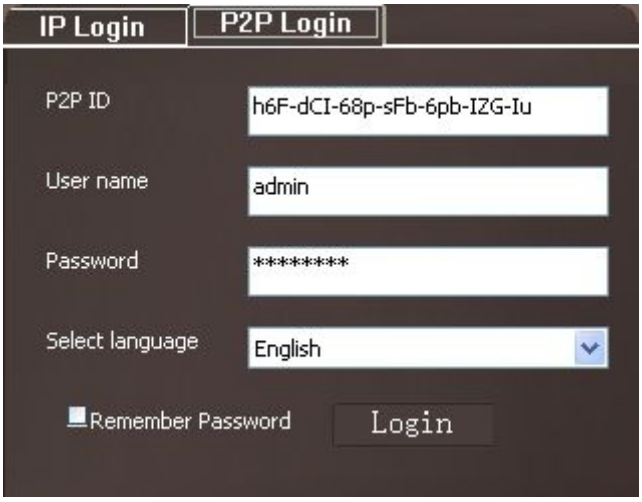
BUY ON www.cablematic.com

there are two kind of login way in Login window: IP Login and P2P Login.

1) IP Login: The default User name is " **admin**", Password: "**0000 0000**",Device port is the same as Media port. Click "Login" and enter the live view.

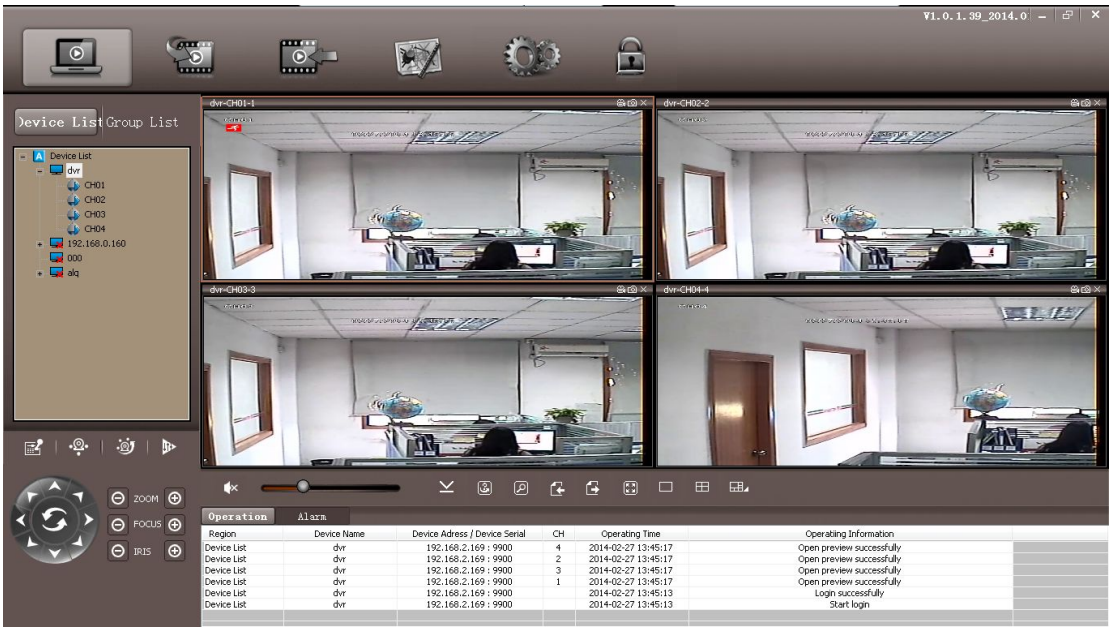


2) P2P Login: P2P ID can be found in the DVR (QR & Information Column), The default User name is " admin", Password: "0000 0000",Click "Login" and enter the live view.



Live view :

BUY ON www.cablematic.com



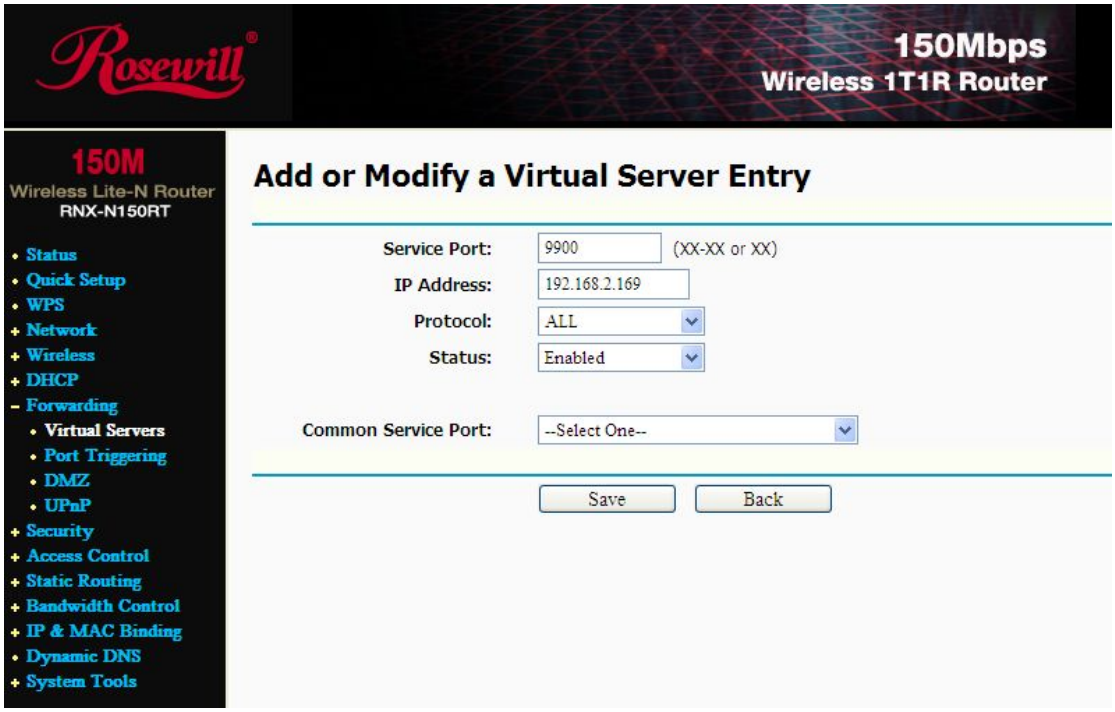
4.1.2 WAN

1. Via Router

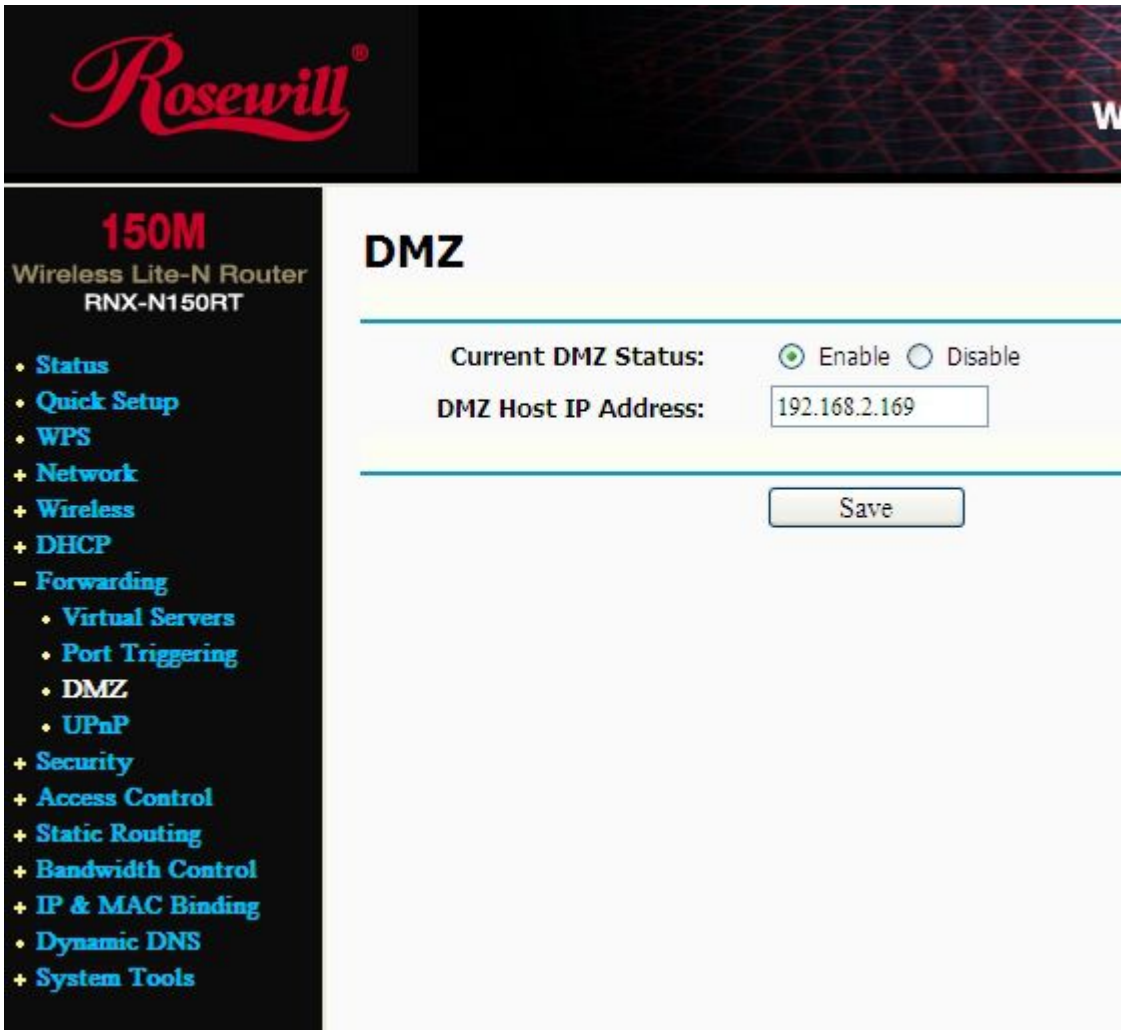
Step 1: Please refer to LAN setting above.

Step2: After confirm the LAN connection, user need to do port forwarding in the router, as the the picture below. Each DVR need two port forwarding : Web & media port (user also can add the LAN IP Address to DMZ, and different router has different setting way, please refer to the router user manual).

After port forwarding, check the WAN IP Address in “Status” of the router, and add the WEB port via WAN IP to visite the DVR. For example: Visit via **http://210.21.229.138:WEB Port** or **http://Domain Name:WEB Port.**



BUY ON
www.cablematic.com



Step 3: Because the changing WAN IP Address is not convenient for visiting, user can visit via Domain Name. Enter Main Manuel---Advanced Setting ----DDNS---Click DDNS ----Select the Domain Name :**leadingdvr.com**。 Just enter: http://Domain Name:WEB Port to visit the DVR.

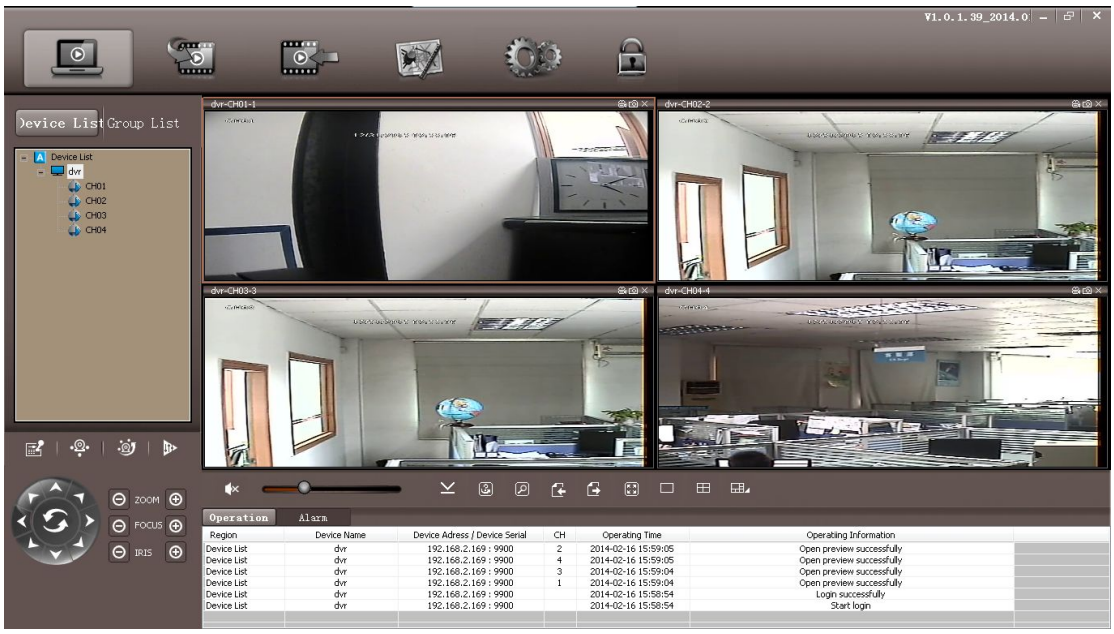
4.2 Via CMS

First, please copy the PC CMS from the software disk and install, for the first running,you need to register administrator and set the Password. As the picture below:

BUY ON www.cablematic.com

After registered, then you can login the CMS

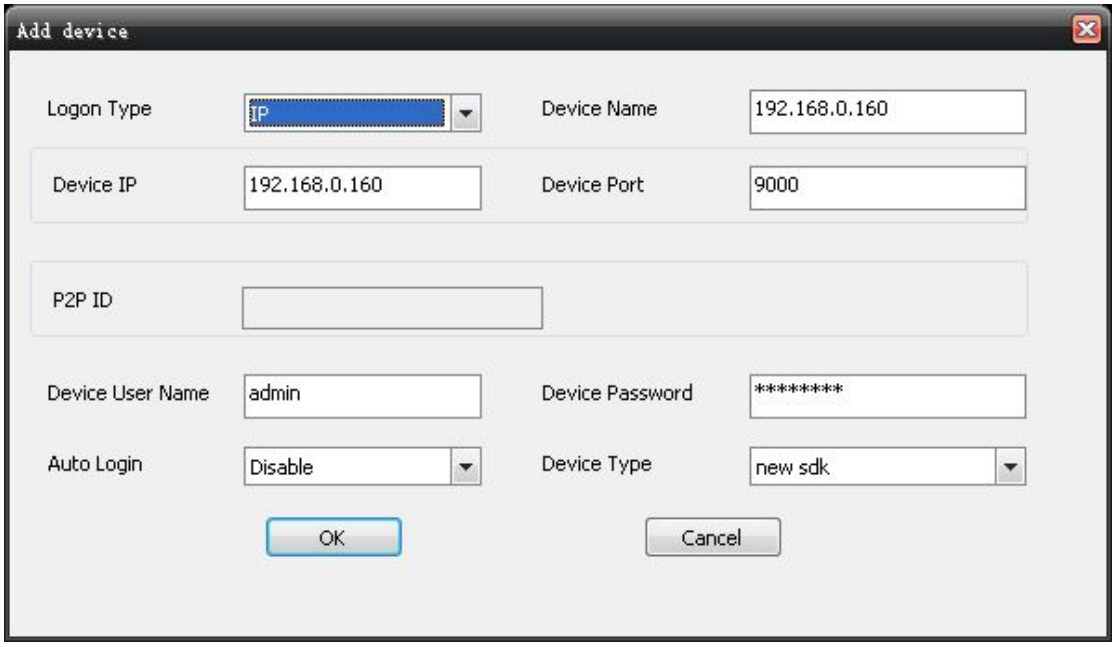
Live View :



Add Device: right click the Device List, click “Add Device”, and will pop up a window as picture below. There are two kinds of Login Type: IP Login (visit via DDNS), and P2P Login (visit via UID)

1. IP Login: Need IP Forwarding via IP

BUY ON www.cablematic.com



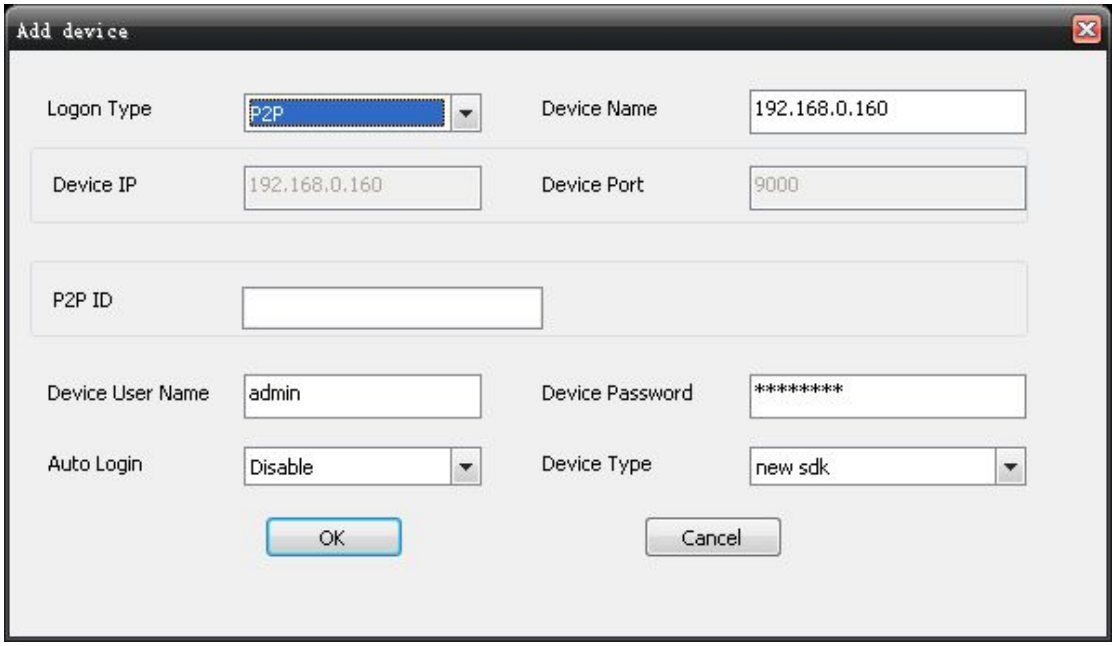
Enter the Device Name,

Device IP : Enter the “IP Address” or “Domain Name” ;

Device Port: Enter the “Media Port”, and the Factory Default is 9000

Factory Default User Name: **admin，** and Device Password: **0000 0000**

2. P2P Login: No need Port Forwarding via UID



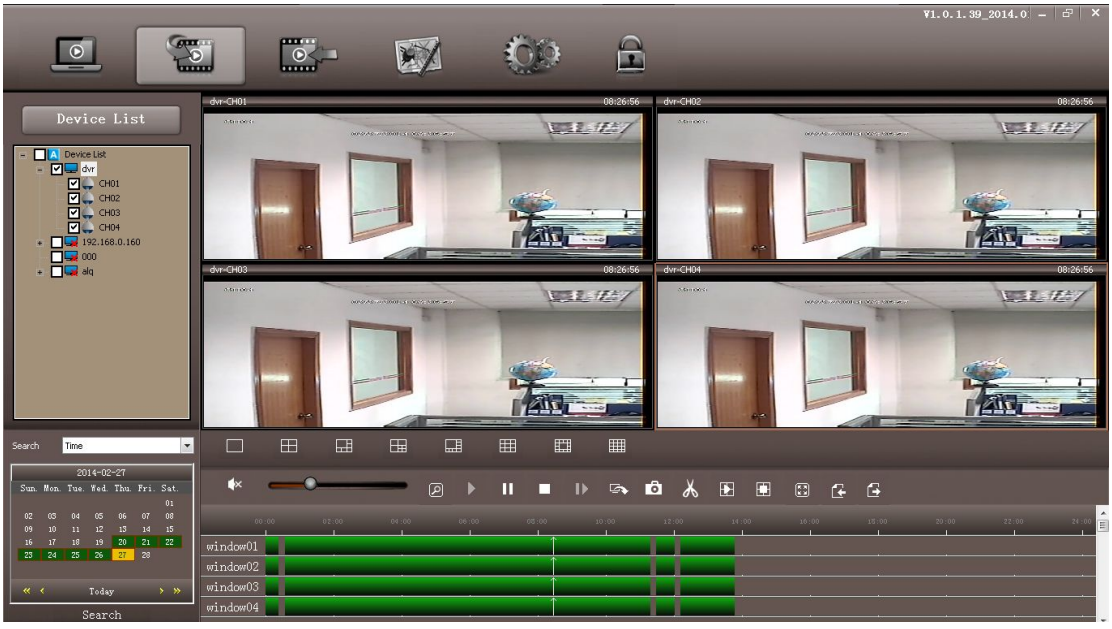
BUY ON www.cablematic.com

After finish adding, right click the new-added device, Click all the Channel and open to remote control

The Function Key in Live View:

Key	Name
	Live View
	Remote Playback
	Local Playback
	E-Map
	Config
	(Screen) Lock
	PTZ
	Preset Point Setting
	Cruise
	Video (Adjustment)

Remote Playback



Right click the added device, and click “DVR Setup”, as the picture below.

Chapter 6 Q & A

1. Q: The DVR can not detect HDD

A: Please check the HDD cable and the power cable whether is in connection to DVR, or the Main board’s HDD Port whether is in good condition. If yes, please check the HDD whether is the support type to the DVR, please refer to the specification.

2. Q:Forget the password and can’t access into system after chang the password.

A: When you forget the login password, please ask technical assistance from technician. A safe ,easily remembered password is recommended.

3. Q: No video signal or abnormal view shows on the Monitor while the DVR and camera in good connection and power supply.

A: Please check the BNC connection status, or wether the cable is in aging , or whether the resolution (NTSC/PAL) math or not.

4. Q:The DVR radiating effect

A:The DVR will produce heat while it’s running, please put the DVR in a safe and good ventilating place to avoid any bad effect causing by longterm work in high temperature environment .

5. Q:Why the remote control doesn’t work while the the remote view and the front panel button is working normally.

A: Pls make sure the remote control and the DVR IR receiver must be aligned while operating. If remote control still not working,please check the battery condition. If it’s the the problems above, please check whether the remote control is broken or not.

6. Q: Can the DVR support PC HDD if it have been install into DVR?

A: The HDD can be used if it is our system support type, but please be noted that all the file will be loss once the DVR runs.

7. Q: Can the DVR keep recording and playback at the same time?

A: Yes, it can. Our DVR system support to record and playback at the same time.

8. Q: Can I delete some record file in the DVR HDD?

A: For safety, we suggest no to delete some record file, user can format the HDD if he need to delete all the record

9. Q: Why I can not login the DVR CMS?

A: Please check the network connection and the setting is correct or not,or whether RJ-45 port is in good connection, or the user name or password for network login is correct or not.

10. Q: Why there is a temporary stutter while remote live viewing.

A: It’s normal thing if it stutter within 5 second temporally

11. Q: Can not find any record information while need to playback

A: Please check the HDD whether in good connection with the DVR, or the system time is correct or not. If this still happen after setting and restart the system, please check the HDD is damaged or not.

12. Q:After setting, the PTZ can not be controlled.

A: Please check the following reasons:

① PTZ Camera fault

BUY ON www.cablematic.com

② The PTZ decoder setting, connection,installation are incorrect.

③ The DVR PTZ setting is incorrect.

④ The PTZ decoder don’ t match to the DVR protocol ;

⑤ The PTZ decoder don’ t match the device address;

⑥While it connect with multi-decoder,you need to add a resistance of 120 ohms at the end of the PTZ decoder line A,B, to eliminate reflection and impedance matching. Otherwise it will cause the PTZ control instability。

13. Q: Why the Motion Detection function is not working

A: Please check the Motion Detection setting , level of sensitive are correct or not.

14. Q: Why the Alarm is not working?

A: Please check the alarm setting, alarm port, alarm input are correct or not.

15. Q: Why the DVR keep buzzer?

A: Please check the relevant Alarm setting, the Motion Detection is enable or not, I/O Alarm whether set as “NC”, and the relevant Disk Alarm setting.

16. Q: After connected to BNC, DVR can display video but the menu, mouse, front panel button and remote control are all unavailable.

A: Connect VGA output : change the output to "CVBS" in "main menu-basic setup--system" and then connect BNC output. If no VGA displayer, please press the front panel "menu" button for about 15s till system switching to BNC output mode automatically..

17. Q: How to do if forgetting password.

A: If the modified password is lost , you can press the front panel "menu" button for about 15s to restore the factory default. Factory default password is 0000 0000.

18. Q: If DVR always happens reboot or stops at the turn on logo and can’t enter into the system, how to do?

A: First of all, take the HDD out and check the problem solved or not. If problem solved, then it should be the HDD’s error and formating the HDD is the solution. If problem still exist, please connect seller or supplier for latest upgrading software

19. Q: Connected with VGA or BNC (CVBS definition) output, DVR shows logo but no image displays after entering system. How to do?

A: Connect the DVR with HDMI displayer,then alter the definition to VGA or BNC via it.

FYI: The suitable definition of BNC is CVBS ; HDMI is 1920*1080 ; VGA are the left options.
